

UFED 1.8.0.0

Release Notes

New logical extraction support for Android apps data

Apps data such as contacts, chats, calls and locations are often important information sources in an investigation. UFED users can now acquire apps data from Android devices via logical extraction. UFED Physical/Logical Analyzer is required to analyze the apps data.

Supported Apps: Facebook, Facebook Messenger, Google+, PingChat! (aka Touch), Skype, Twitter, Viber, Yahoo Messenger, Whatsapp, TigerText, Dropbox, QIP, Kik Messenger, Evernote, Kakao Talk, ICQ, V Kontakte and more

Note: The apps data will not be part of the UFED HTML and XML reports.

Exclusive! Disable phone lock on selected Samsung Android devices

UFED can now disable pattern, PIN or password locks on selected Samsung Android devices using cable 130, to perform any type of extraction – logical, file system and physical.

No need to know the pattern, PIN, or password – once the lock is disabled, you can use any type of password to access the mobile device.

The device lock will remain disabled even after a restart.

This unique function is available by selecting “Password Extraction” from the UFED menu.

Disable password from Android device

Forensic method	New	Total
Logical extraction	217	4827
Physical extraction*	363	2216
File system extraction	249	1858
Password extraction	186	1045
Total device profiles	1015	9946

*Including GPS devices

UFED

- **Samsung Galaxy SIII Family** – Physical and file system extraction, and decoding
- **Android 4.2.x** – Logical, file system, and physical extraction support
- **Nokia BB5** – Physical extraction from an additional 21 locked and unlocked devices
- **iPad 4 and iPad mini** - Logical extraction support
- **Nokia DCT4, DCT4+ and BB5** – Password extraction on selected devices
- **Mass storage devices** – Physical extraction is also supported via UFED Touch in addition to UFED Physical Analyzer
- **Remaining time display in UFED Touch** while performing physical and file system extraction
- **New tool** for releasing Samsung Android devices in ODIN mode is now available under device tools

UFED CHINEX

- **Password extraction** from mobile phones with Chinese chipsets
- **Chinese chipset auto detection** identifies devices supported by UFED

UFED Phone Detective

- **Additional 7 languages** – German, Russian, French, Dutch, Japanese, Spanish, and Portuguese.

Chinese chipset auto detection

Identifying the Chinese chipset included in a device can be challenging. UFED CHINEX now enables Chinese chipset auto detection, identifying devices supported by the generic chipset extraction options available in the UFED. This function is available under 'Physical Extraction'. The Chinese chipset can be seen on the UFED screen or written to a file.

Note: Making the process even more efficient, auto detection of device chipset and physical extraction can be done in a single step.

UFED Logical Users...

Upgrade to UFED Logical Analyzer Now!
Get much more from your data easily and efficiently.
